SEE WATER, INC. LAUNCHES NEW PACIFIC 2.0 SOFTWARE FOR ADVANCED PRE-ENGINEERED CONTROL PANELS

Riverside, CALIF., Jun. 7, 2023 – See Water, Inc., an industry-leading manufacturer of pump control panels for water and wastewater operations, recently launched Pacific 2.0, a software upgrade for its advanced pre-engineered pump control panels.

“After several months of research and development, we are excited to roll out this significant enhancement to our advanced control systems,” said CEO and President, Mike Johnson. “Our Engineering Team implemented feedback from our customers and worked diligently to design a software solution that will reset the industry standard as we know it.”

Pacific 2.0 is the beginning of a new era for pump stations in the water and wastewater industry. It provides extensive system customization options and easy user guide tools with step-by-step instructions for the adjustable fields. It has never been simpler to configure the sensors that will operate the pump(s). Pacific 2.0 also provides a flip feature for easy toggle between float mode and transducer mode.

Users may also setup the variable frequency drives on Parabola® control panels to the pump specifications and input nameplate data for the motor amperage, frequency, current, speed, service factor, insulation class and code letter.

The software supports standard industry communication protocols, such as: BACnet IP/MSTP, CANopen, Modbus RTU/TCP, and RS485.

Pacific 2.0 will come standard with the webserver-enabled Trident® industrial control panel, Hydra® transducer control panel and Parabola® VFD control panel. Hydra® and Parabola® control panels will include an enhanced screen resolution and graphic display on the user-friendly HMI compared to previous models. The new HMI features an 800 x 480 screen resolution with a NEMA Type 4X rated resistive film touch panel and 7.0-inch screen size.

“Pacific 2.0 offers more extensive customization options but simplifies the setup process. It is extremely easy for any user to configure a panel with this software,” said Chief Operating Officer, Ken Durant. “We believe this upgrade will deliver significant value to our customers out in the field.”
